Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                               This sequence represents a novel beta-glucanase isolated from Bacillus alkalophilus DSM 9956. This enzyme is useful for removing glucan and/or lichenan from membranes and equipment in the food industry, especially

The recombinant lichenase enzyme produced by the transformants is useful in beer production for decomposing betaglucan from barley.

```
The present invention relates to a food stuff comprising barley feed and transgenic barley malt where the transgenic barley malt comprises a recombinant carbohydrate degrading enzyme comprising a (1,31,4)-beta glucanase. The food stuff is useful to feed animal, preferably chickens Barley is cheaper than corn, the principal foodstuff of chickens. Chickens cannot efficiently utilise barley as an energy source as they do not possess a gut enzyme that depolymentises beta-D-glucan, major carbohydrate present in the barley endosperm. The invention provides a barley based foodstuff which comprises a recombinant carbohydrate present in the barley endosperm. The invention provides a degrading enzyme improving the nutritional value of the foodstuff. The present sequence is barley recombinant, thermostable (1,3-1,4)-beta-glucanase enzyme.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SYNKFDCGENRSVQTYGYGYGYEVRMKPAKNTGIVSSFFTYTGPTE---GTPWDEIDIEFL 111

The enzyme is useful for lowering the viscosity of brewing mashes and in the production of feedstuff.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This hybrid protein is encoded by the beta-glucanase-H1 gene. Following processing of the signal peptide the mature protein is produced, comprising the amino terminus of the amylolique-faciens beta-glucanase and the carboxyl-terminal half of the B.macerans beta-glucanase. This hybrid protein is thermostable and hydrolyses beta-glucanase. This hybrid protein is thermostable Reducing sugars are obtd. at high temps. and thus this enzyme can be used in the mfr. of food prods., esp. beer and animal feed (eg for feeding poultry).                                                                                                                                                                                                                                                                                                                                                                                                                                                           The corresp, gene and the plant promoter region are inserted into an expression vector and used to transform barley cells. The transformants are used to regenerate barley plants which are useful in brewing. This protein accumulates in the ripe (but ungerminated) seeds. The proportion of these to malted seeds is increased therefore, without an unacceptable increase in viscosity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Soil bacterium; enzyme; lichenase; endo-1,3/1,4-beta-glucanase; brewing.

This sequence is the lichenase (licA) of Orpinomyces sp. strain PC-2 of the invention. The protein was purified from a fungus or a fungal culture or from a recombinant DNA molecule having a fungal lichenase coding sequence. The lichenase enzyme hydrolyses the beta-1,4-glucan bonds adjacent to beta-1,3-linked glucan bonds, but does not cleave beta-1,4-linked glucans. They can be used for the treatment of animal grain-containing feeds to improve nutrient availability and for treatment
                                                                                                                                                                                                              67 GSFQSNIITGKAGAQKTSEKHHAVSPAADQAFHTYGLEWTPNYVRWTVDGQEVRKTEGGQ 126

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This hybrid protein is encoded by the beta-glucanase-H2 gene. Following processing of the signal peptide the mature protein is produced, comprising the amino terminus of the B.macerans beta-glucanase and the carboxyl-terminal half of the B.amylo-liquefaciens beta-glucanase. This hybrid protein is thermostable and hydrolyses beta-glycosidic linkages in (1,3-1,4)-beta-glucans. Reducing sugars are obtd. at high temps. and

                                                                                                                                                                                                                                                                                                                                                                                                                 23-SEP-1
                                                                                                                                                                                                                                                                                                                                                                                                                                               29-SEP-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  21-OCT-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     22-OCT-1
```

```
The invention relates to identifying target proteins (ABB90790-ABB94016) for herbicidally active compounds, comprising and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms using suitable search parameters, where plant sequences having an E-value sequences by a factor of 3 than the E-value of most similar non-plant sequences are selected. The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are useful as herbicides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Identifying plant target proteins for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant
                                                                                                                                                                                                                                                                                 QEVRKTEGGQVSNL--TGTQGLRF--NLWSSESAAWVG---QFDESKLPLFQFINWVKVY 169

The present invention relates to a food stuff comprising barley feed and transgenic barley malt where the transgenic barley malt comprises a recombinant carbohydrate degrading enzyme comprising a (1,3:1,4)-beta glucanase. The food stuff is useful to feed animal, preferably chickens Barley is cheaper than corn, the principal foodstuff of chickens. Chickens cannot efficiently utilise barley as an energy source as they do not possess a gut enzyme that depolymentises beta-D-glucan, major carbohydrate present in the barley endosperm. The invention provides a barley based foodstuff which comprises a recombinant carbohydrate present in the barley endosperm: The invention provides a degrading enzyme improving the nutritional value of the foodstuff. The present sequence is barley recombinant, thermostable (1,3-1,4)-beta-glucanase enzyme.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    SYNKFDCGENRSVQTYGYGYGYEYEVRMKPAKNTGIVSSFFTYTGPTE---GTPWDEIDIEFL 111
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                GKNPGSFQSNIITGKAGAQKTSEKHHAVSPAADQAFHTYGLEWTPNYVRWTVDGQEVRKT 122
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Barley; transgenic barley malt; carbohydrate degrading enzyme; chicke

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This hybrid protein is encoded by the beta-glucanase-H1 gene. Following processing of the signal peptide the mature protein is produced, comprising the amino terminal of the amylolique-faciens beta-glucanase and the carboxyl-terminal half of the B.macerans beta-glucanase. This hybrid protein is thermostable and hydrolyses beta-glycosidic linkages in (1,3-1,4) beta-glucans. Reducing sugars are obtd. at high temps. and thus this enzyme can be used in the mfr. of food prods., esp. beer and animal feed (eg for feeding poultry). See also AAQ05833.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Vonwettstein D;

The enzyme is useful for lowering the viscosity of brewing mashes and in the production of feedstuff.

                                                                                                                                                                                                                                          The corresp, gene and the plant promoter region are inserted into an expression vector and used to transform barley cells. The transformants are used to regenerate barley plants which are useful in brewing. This protein accumulates in the ripe (but ungerminated) seeds. The proportion of these to malted seeds is increased therefore, without an unacceptable increase in viscosity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Soil bacterium; enzyme; lichenase; endo-1,3/1,4-beta-glucanase; brewing

The enzyme is useful in brewing and for degrading beta-glucanases that cause problems during filtration.

                                                                                                                                                                                                                                                          3 SAKDFSGAELYTLEEVQYGKFEARMKMAAASGTVSSMFLYQNGSEIADGRPWVEVDIEVL
enzyme with lichenase/endo-1,3/1,4-beta-glucanase (E.C. 3.2.1.73) activity. The enzyme is useful in brewing and for degrading beta-glucanases that cause problems during filtration.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New thermostable (1,3-1,4)-beta-glucanase - prepd. using hybrid gene obtd. using Bacillus amyloliquefaciens and B.macerans genes

Following processing of the signal peptide the mature protein is produced, comprising the amino terminus of the B.macerans beta-glucanase and the carboxyl-terminal half of the B.amylo-liquefaciens beta-glucanese. This hybrid protein is thermostable and hydrolyses beta-glycosidic linkages in (1,3-1,4)-beta-glucans. Reducing sugars are obtd. at high temps, and

The protein was purified from a fungus or a fungal culture or from a recombinant DNA molecule having a fungal lichenase coding sequence. The lichenase enzyme hydrolyses the beta-1,4-glucan bonds adjacent to beta-1,3-linked glucan bonds, but does not cleave beta-1,4-linked glucans. They can be used for the treatment of animal grain-containing feeds to improve nutrient availability and for treatment
                                                                                                                                                                                  67 GSFQSNIITGKAGAQKTSEKHHAVSPAADQAFHTYGLEWTPNYVRWTVDGQEVRKTEGGQ 126

The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are useful as herbicides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  sednences
